## PENNSYLVANIA AN AGRICULTURAL STATE

**P**ENNSYLVANIA is one of the great agricultural states of the Union. The Commonwealth has long been famous for its mines and its factories, but capital invested in farms, crops, stock, and farm machinery and equipment is double the capital in mining and quarrying (\$644,974,100). In total capital invested, agriculture compares very favorably with either the metal and metal products industries (\$1,915,841,000) or all other manufacturing industries of the State (\$1,754,277,000).

Pennsylvania had 169,027 farms valued at \$864,199,795, according to the Federal census of 1940. Farm implements and machinery were worth \$129,-099,593. Livestock and chickens and turkeys on farms January 1, 1943 were inventoried at \$237,308,000. These three items alone represent an investment of \$1,230,607,388.

Cash income from marketings from Pennsylvania farms amounted to \$310,949,000 in 1941 and \$391,074,000 in 1942. In this respect, the State ranked 14th in the Nation. Among the States, Pennsylvania in 1942 was first in the production of cigar-leaf tobacco; second in the production of buckwheat, fourth in the production of clover and timothy hay, commercial apples, sour cherries, and maple products; fifth in the production of grapes; sixth in potatoes and all cherries; seventh in all tobacco and sweet cherries; eighth in production of timothy seed; and ninth in the production of peaches. Relative importance of crops within the Commonwealth and among the States is presented in some detail on page 5.

### PENNSYLVANIA 1942 CROP PRODUCTION

**V**ALUE of the principal field and fruit crops in Pennsylvania in 1942 was estimated at \$179,743,000 compared with \$159,828,000 in 1941, an increase of 12 percent. Combined production of field and fruit crops was about eight percent larger than the previous year due chiefly to a marked increase in the hay crop, although corn and apples were other major crops contributing to the increase. Production of wheat, oats, potatoes and tobacco was substantially lower than in 1941.

Average prices received by Pennsylvania farmers for 1942 crops were higher than in 1941. Anticipated increases range from about 10 percent for grain crops to 25 percent for fruits. Wholesale and retail price controls now extend to over 90 percent of food products. Price ceilings generally do not apply directly to prices of unfinished farm products, and processors of agricultural products continue to compete for agricultural raw materials at generally advancing prices.

**CORN** An increase of 1 percent in acreage and 4 percent in yield per acre resulted in a corn crop 5 percent larger than in 1941. Plenty of moisture and the increased use of hybrid seed were chiefly responsible for the higher yield per acre. Blight was rather severe in some fields in south-central counties. Quality of the crop was impaired by frosts which caught some late planted corn before ripe and by heavy rains which caused considerable molding in the shock.

**WHEAT** A sharp decline in acreage and of half a bushel in yield per acre combined to reduce the 1942 wheat crop to better than 9 percent below the 1941 crop. Rain at blossom time and Hessian fly lowered yields materially in the south-central part of the State and frequent showers interfered with harvesting in many localities and some grain was lost in the shock.

**OTHER GRAINS** Increased acreages and yield per acre were responsible for larger crops of both barley and rye compared with 1941. Smaller oats and buckwheat crops were due to a reduction in both acreage and yield.

**POTATOES** The 1942 potato crop was much smaller than in 1941 as a result of a reduction of 5 percent in acreage and 13 percent in yield. Yields were sharply reduced by the worst infection of blight in years, which was especially destructive northwest of the mountains in unsprayed fields. There were many small tubers and a number of fields were so poor that they were not worth digging.

**TOBACCO** It was an unfavorable year for tobacco. Acreage was reduced only slightly below 1941 but yield per acre was held down by rust, rains and hail. Curing weather was unfavorable and quality impaired. Late crops in general cured out better than earlier ones.

**HAY AND PASTURE** The 1942 pasture season was excellent. This was the best hay season in years and abundant crops of all kinds were produced, although frequent rains greatly interfered with harvesting and considerable quantities were left on the fields.

**FRUITS** An excellent crop of apples, both as to quantity and quality, was produced in 1942, although shortage of harvest labor and a heavy windstorm before picking was finished caused considerable loss in some orchards. Pear and grape crops were also larger than in 1941 while the peach and cherry crops were slightly smaller.

#### FARM LIVESTOCK INVENTORY, JANUARY 1, 1943

**TOTAL** combined farm inventory numbers of the five species of livestock (horses, mules, cattle, sheep and hogs) on Pennsylvania farms January 1, 1943 increased about 4½ percent over January 1, 1942. Increases were registered for all species except workstock. The number of chickens on farms increased almost 14 percent between the two first-of-year inventories, while turkey numbers decreased 10 per cent.

Aggregate farm inventory value of the five livestock species increased 27 percent from January 1, 1942 to January 1, 1943. Values per head of all livestock species participated in this advance, with hogs showing an increase of 48 percent for the greatest gain and sheep an increase of 9 percent for the smallest gain. Increases in value per head over a year ago for other species of livestock were as follows: horses, 21 percent; mules, 23 percent; and all cattle, 25 percent. Milk cows increased 23 percent in value per head compared with 27 percent in Ohio, 28 percent in Michigan, 17 percent in Wisconsin, 28 percent in Minnesota, and 38 percent in New York.

**HORSES & MULES** The decline in horse and mule numbers, which began more than ten years ago, continued during 1942. Stallions registered during 1942 by the Bureau of Animal Industry, Pennsylvania Department of Agriculture, numbered 320, compared with 396 in 1941, 438 in 1940 and 453 in 1939.

**CATTLE** The number of cattle and calves on farms January 1, 1943 was 2 percent greater than a year ago and the highest since 1920. All classes of cattle participated in this increase, except milk heifers one to two years old, which declined 1 percent and beef heifers one to two years old which did not change. Steer numbers showed the greatest percentage gain of 11 percent and milk cows the smallest of 1 percent. Gains in numbers for other classes ranged from 4 to 8 percent.

**HOGS** Hog numbers on Pennsylvania farms increased 15 percent during 1942, with pigs under six months showing an increase of 23 percent and sows and gilts 37 percent, while other hogs six months old and over declined 9 percent. The combined 1942 spring and fall pig crop was 24 percent above the 1941 crop, while the indicated number of sows to farrow this spring is 36 percent greater than the number farrowed last spring.

**SHEEP** Sheep numbers increased 4 percent from January 1, 1942 to January 1, 1943. All classes except ewes, which declined 2 percent, showed gains over a year previous.

**POULTRY** The number of chickens on Pennsylvania farms increased 14 percent and turkeys decreased 10 percent from January 1 a year ago to January 1 this year. Intended purchases of baby chicks in 1943 in Pennsylvania show an increase of 23 percent over purchases of 1942, according to the result of a recent survey of crop correspondents. Some differences between intentions and actual purchases may be expected, depending upon egg prices during the hatching season and the feed-egg and feed-chicken price relationships.
